Single PDF RAG Assistant CV Entry

Getamesay Zegeye | Independent AI portfolio project | October 2026

Python | Streamlit | MiniLM | FAISS | Google Gen AI SDK

Selected project experience

- Built a Streamlit PDF question-answering application using local MiniLM embeddings, persistent FAISS search and Gemini Flash-Lite responses with page citations.
- Combined semantic and keyword retrieval with same-page neighbor expansion to recover evidence missed by vector search.
- Improved a 12-question development/regression evaluation from 11/12 reviewed passes to 12/12 developer-reported passes; results are limited to one research PDF.

Technical scope

Single-PDF upload, 120-word chunks with 25-word overlap, local CPU embeddings, saved FAISS indexes, hybrid retrieval and visible page evidence.

Evaluation boundary

The 12-question set was used during development. The final full retest was reported by the developer; no unseen-document accuracy or production deployment is claimed.
